

IDEAS

Choropleth Map

Bar Chart

* attribute
= rate
(coverage
penetration
...)

Proportional Symbol Map

Tree map

Bump Chart

Area Chart

Line Chart

Streamgraph

color = state
area = rate

Sankey Diagram

Bubble Plot

color = countries
size = attribute

Heatmap

color = value %

Radar Chart

Isotype

Pie Chart

FILTER

Pie Chart

→ not feasible, we have 13 states, not the rate doesn't have significant difference, hard to compare

Radar Chart

→ small multiples might be better to visualize comparison. Same close data is not easy for audience to link

Isotype

→ not feasible, 13 states and 4 device type, too many icons, hard for viewers to interpret, need to count a lot.

CATEGORIZE

rectangle shape

- Bar Chart
- Tree map
- Heatmap

circle / triangle

- Pie Chart
- Bubble Plot
- Radar Chart

Geospatial shape

- Choropleth map
- Proportional Symbol map

Icon

- Isotype

line / point / area

- Line Chart
- Area Chart
- Bump Chart
- Streamgraph
- Sankey

COMBINE & REFINE

Bar Chart + Line Chart

=>

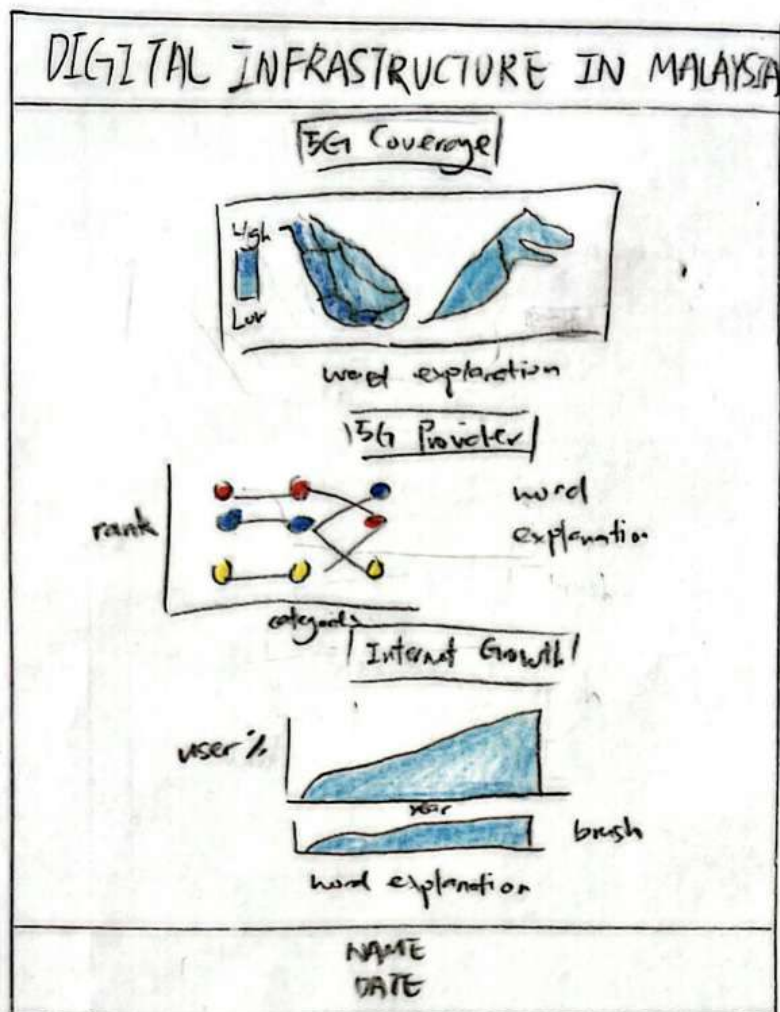

This combination provides a more informative chart, helps in showing trend and comparison

QUESTIONS

- Does Vega lite support Sankey Diagram implementation?
- Does all the visualizations lead to clear story?
- Is it answering the viewer's question?

LAYOUT

TITLE: Digital Infrastructure

AUTHOR: Jocelyn Tan

DATE: 24/09/2024

SHEET: 2

TASK: FIT3119 Assignment 2

OPERATIONS

① highlight item when hover

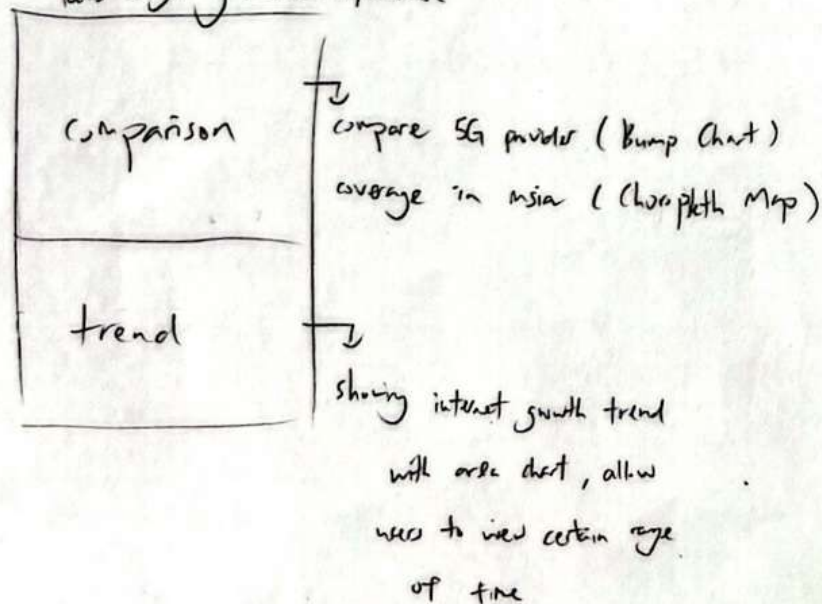

② Brush to zoom in for certain range

FOCUS

focus on giving overview information

DISCUSSION

Advantages

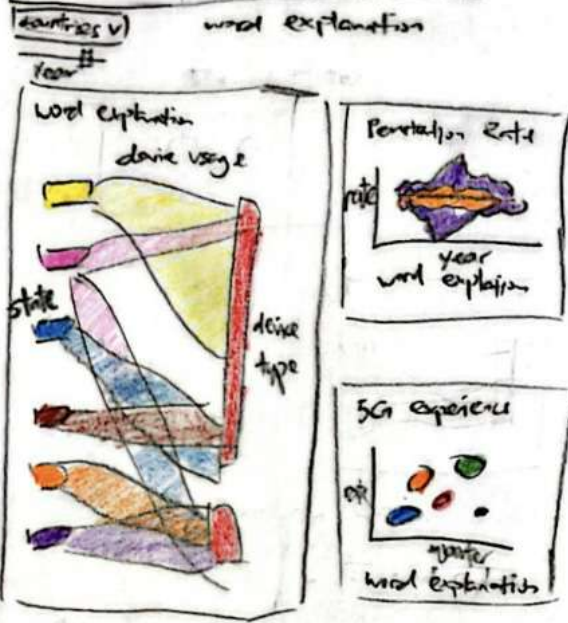

- Good and engaging user interaction
- White space are well used to create organized website

Disadvantages

- Limited information
 - ↳ only cover 5G related info & internet
- Limited visuals
 - ↳ Lack of advanced idioms

LAYOUT

DIGITAL INFRASTRUCTURE IN MALAYSIA

NAME
DATE

TITLE: Digital Infrastructure

AUTHOR: Jocelyn Tan

DATE: 24/09/2024

SHEET: 3

TASK: FZT3179 Assignment 2

OPERATIONS

① When hover to map / bar, updated both visuals

② 2021

users can use time slider to filter the year

③

All v
Malaysia v
Singapore v

users can use dropdown menu to select certain country

FOCUS

focus on comparison of data

DISCUSSION

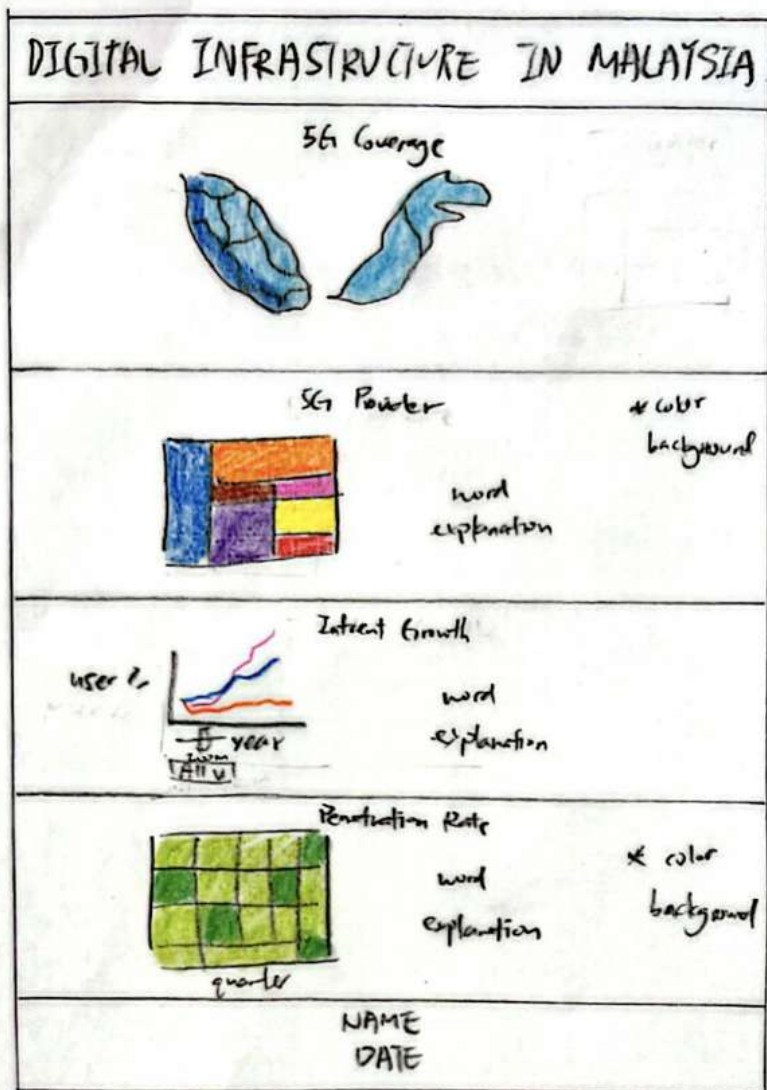

Advantages

- Employs mix of data visualizations make it fun for audience.
- Clear visual hierarchy, important data / visual is emphasized

Disadvantages

- The layout might not be optimized for different screen size
- No clear visual hierarchy for visuals beside scatter diagram.

LAYOUT

TITLE: Digital Infrastructure

AUTHOR: Jucelya Tan

DATE: 24/09/2024

SHEET: 4

TASK: FIT3179 Assignment 2

OPERATIONS

① highlight item when hover

②

slider for audience to zoom data

③

users can use dropdown menu to filter countries

FOCUS

3 focuses: one for each section of the story

5G Info

① Map

→ darker color
higher coverage

Internet

→ x-axis: year

→ y-axis: users percentage

→ color: countries

Penetration Rate

→ x-axis: quarter

→ y-axis: Penetration service type

type

② Treemap

→ bigger area
value higher
(rank higher)

→ size: population

→ darker color
represent higher
rate / value

DISCUSSION

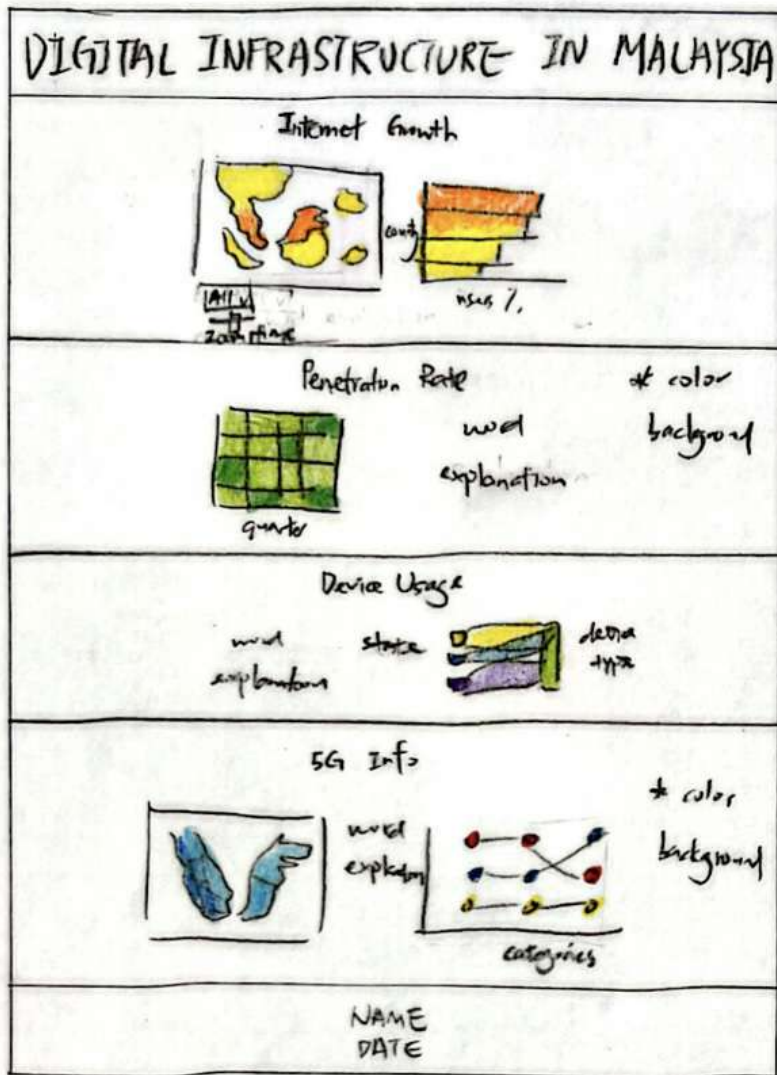

Advantages

- well structured, each section has clear topic
- simple design, high data ink ratio

Disadvantages

- The layout has no main focus info, visualization, not attractive for audience
- Everything cluttered on the side, not balanced

LAYOUT

DATE: 24/09/2024

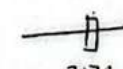

SHEET: 5

TASK: FIT3179 Assignment 2

OPERATIONS

① When hover to map / bar, update both visuals

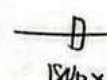

②  2021

Use time slider to filter years

③ 

Use dropdown menu to centre countries

④  100%

Use slider to zoom certain country

⑤ highlight item when hover

DETAILS

→ Collect existing datasets, web scraping, R and Excel to clean and format data

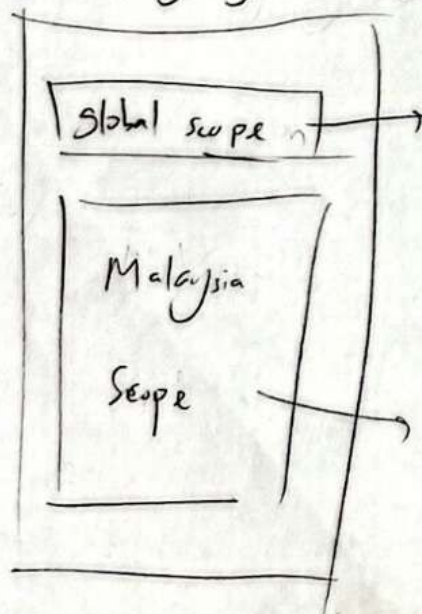

→ Time to implement:

3 days for build charts

5 days for web building/design

FOCUS

Focus on storytelling and guiding audience

compare / see trend of internet growth over time between malaysia and neighbouring countries

compare / see trend of Malaysia for different aspects (5G, penetration etc.)
